Job Profile

Position: Senior Engineer – 15+ years experience

Job Division / Location: Baton Rouge, Louisiana

Description: The candidate must be a proven problem solver familiar with the processes and equipment used in chemical plants and refineries. The basic job responsibility will be to interface with current clients to solve their technical problems in a timely and cost effective manner. The job also requires the development of new clients in the chemical process industry by making technical presentations at client sites, conferences and technical society meetings.

Experience: Detailed knowledge of the pertinent codes and standards (API 579, ASME B&PV Sec. VIII, ASME B31.3) is required. A registered professional engineer with a M.S. or Ph.D. in mechanical engineering is preferred. The engineer should have experience using a range of software tools such as finite element analysis, piping stress analysis, pressure vessel design and fitness for service assessment.
