

## Job Profile

**Position:** Entry-level Structural Engineers

**Job Division / Location:** Houston, Texas

**Description:** Stress Engineering Services Inc. an engineering consulting firm headquartered in Houston, Texas, seeks entry-level structural engineers for our floating systems and fitness for service practices. Floating systems folks are concerned with design and analysis of floating oil and gas production and drilling platforms in up to 10,000 feet of water and the risers and pipelines that service them. Fitness for service folks are concerned with the evaluation and safe operation of equipment for pipelines, power plants, refineries, chemical plants, and manufacturing facilities.

**Experience:** Applicants are required to have a M.S. or Ph.D. degree in Mechanical Engineering, Civil Engineering, Electrical Engineering, Aerospace Engineering, or Engineering Mechanics from an ABET-accredited school. Our most successful employees have a strong academic background, enjoy real world problems, and possess good people skills.

Stress Engineering Services Inc. is an employee owned company with outstanding opportunities for personal and career development in a strong client service oriented culture. We have been among the Best Places to Work in Texas for a number of years and have appeared on the Aggie 100 list of fastest growing companies run by Aggies.

Interested applicants should forward their resume and cover letter to [jobs@stress.com](mailto:jobs@stress.com).
